Professional Summary

Materials engineer (B.Tech, IIT Gandhinagar) completing an MSc in Management at EBS Wiesbaden. Diagnoses operational problems on-site and builds the fix into a repeatable process. Took researcher conversion at an early-stage platform from 1% to 30% by finding the actual cause of drop-off, then built the fix into a repeatable six-stage workflow with KPI tracking. Client and field projects with KUKA Robotics, a German medical-device manufacturer, and a Mumbai laundry operation, each producing analysis and recommendations across market entry, circular supply chain design, and bottleneck analysis. Finishing the MSc in June 2027, looking for an internship or working student role in operations, process improvement, or project management.

Professional Experience

Physics Mindboggler **Feb – Jun 2025**

Operations & Process, Researcher Acquisition | Remote, Working Student

- Diagnosed a 1% researcher-conversion rate by following up with researchers who had not responded or replied slowly and asking why; identified a trust deficit as the root cause.
- Redesigned outreach from cold email to personalised LinkedIn engagement, moving conversion from 1% to 30% by addressing the cause rather than increasing volume.
- Systematised the approach into a six-stage repeatable workflow with KPI dashboards tracking conversion rate, funnel progression, and response rates.

Client & Field Projects

Client projects delivered through EBS Wiesbaden and SPJIMR Mumbai. Team projects unless noted. Each produced analysis and recommendations rather than implementation.

Market Entry Strategy — KUKA Robotics **Aug – Dec 2024**

EBS Consulting Field Project | Team of 5

- Benchmarked software-defined offerings across Fanuc, ABB, and Universal Robots, identifying the absence of a single integrated platform as the open gap.
- Conducted primary interviews with system integrators and industry representatives, establishing integrators as the decisive stakeholder in the market entry path.
- Designed a three-layer platform architecture connecting hardware, digital twin workflow, and customer-facing interface, with an integrator incentive structure.

Circular Supply Chain Design — RAGUSE **Jan – Apr 2025**

EBS Consulting Field Project | Team of 6 | Medical-device manufacturer

- Designed an RFID-enabled tracking system for surgical drapes across manufacturing, hospital use, collection, and recycling, spanning three production sites.
- Modelled 90% collection and 75% recycling yield targets, with CapEx and OpEx breakdown and breakeven analysis.
- Mapped the partner ecosystem across hospitals, recyclers, and logistics providers, and built a six-month pilot roadmap presented to client leadership.

Bottleneck Analysis — Laundry Operation, Mumbai **Dec 2023 – Jun 2024**

SPJIMR Field Project

- Conducted time-and-motion analysis across the full service workflow, measuring throughput rate, queue length, and processing time at each stage.
- Identified ironing and air-drying as the binding constraints through capacity and flow rate comparison across stages.
- Recommended process interventions improving overall system utilisation by 23%.

Investment Screening — Solid-State Battery Sector **Aug – Dec 2024**

EBS Field Project

- Screened 626 European firms using Tracxn, narrowing to six finalists against a seven-dimension scoring framework.
- Conducted due diligence on the leading candidate and produced a structured investment recommendation, with an ecosystem map across technology maturity and funding stage.

Projects

Sales Operations — Industrial B2B Lead Pipeline **Independent, 2026**

- HubSpot pipeline for a simulated industrial-inspection-equipment sales motion: custom deal stages, properties, and data-hygiene rules built to survive scale.
- n8n workflow (Render, NeonDB) enriching inbound leads with firmographic data via the Gemini API, scoring each against a documented, auditable ICP.
- Reporting layer: pipeline by stage, conversion by segment, lead-source performance.

AI-Powered VC Qualification Engine

Stack: n8n, NeonDB, Render, Gemini API

- End-to-end prototype automating first-pass startup screening for a VC firm: regulatory-compliance comparison, benchmarking against 100+ stored companies, auto-generated scoring dashboard.

Safety Systems Prototype — Fraunhofer IPT Hackathon **Jul 2025**

- Python and Arduino prototype for live contamination risk monitoring, built to a 24-hour constraint alongside MTU Aero Engines. Outstanding Performance Certificate.

Education

MSc Management · EBS University for Business and Law, Germany **Aug 2024 – Jun 2027 (expected)**

Thesis: Business Model Innovation in Technology-Driven Firms (Amit & Zott's Activity System Framework)

Global Management Programme · SP Jain Institute of Management & Research, Mumbai **Dec 2023 – Jun 2024**

GPA 3.4/4, ranked top 2 of cohort

B.Tech, Materials Science & Engineering · IIT Gandhinagar **Aug 2019 – Jun 2023**

Undergraduate research: electrokinetic energy harvesting

Skills

Operations & Process: Process mapping & bottleneck analysis, supply chain & circular design, KPI framework design, workflow design & systematisation, primary research & stakeholder interviews

Tools: Excel (advanced), Power BI, SQL, Python

AI & Automation: n8n, Gemini API, Google Cloud Console, LLM workflow integration, HubSpot

Languages: English (C1), German (B1; Telc B2 scheduled September 2026)

Certifications & Awards

- PM Certification (24 PDUs), SPJIMR (PMI-authorised partner), 2024
- Management Consulting Specialization, Emory University, 2024
- Fundamental Business Certifications, Harvard Business Publishing, 2024
- SP Jain Dean's Honor List, 2024
- CAT 98.3 percentile (Quant 99.7 percentile), top 2% nationally, India
- Outstanding Performance Certificate, Fraunhofer IPT Hackathon with MTU Aero Engines, 2025
- 2nd place, EBS Quantathon, 2026

Wiesbaden, July 2026
